

Standard Precision Universal Joints - DIN 808 - Series "G"

- Made of high grade steel
- All friction areas are hardened & friction polished
- Assembled almost backlash free
- Round bore standard
- Max. speed 1000rpm
- Keyway & square hole optional
- Max. angle Single: 45°
 Double: 90°
- Most sizes ex stock

Part Number		Bore D ₁	O/D D ₂	Length				Keyway		Square S	Weight kg.

The Technical Appendix (pages 47-51) describe how to calculate the dimensions of the joint and contain instructions for their application.

Low Cost Universal Joints With Friction Bearings - DIN 808 - Series "G"

- Low cost economy range
- Unhardened, unpolished
- Greater backlash
- Suitable for medium-low speed
with limited torsional requirements
- Max. speed 1000rpm
- Round bore standard
- Optional square hole & keyways
- Max. angle Single: 45°
 Double: 90°
- Most sizes ex stock

Part Number		Bore D ₁	O/D D ₂	Length				Keyway		Square S	Weight kg.	
Single	Double			L ₁	L ₂	L ₃	L ₄	B	T		Single	Double

The Technical Appendix (pages 47-51) describe how to calculate the dimensions of the joint and contain instructions for their application.

Standard Precision Reinforced Universal Joints - DIN 808

- Series "G"

- Made of high grade steel
- All friction areas are hardened and friction polished
- Assembled almost backlash free
- Max. speed 1000rpm
- Max. angle Single: 45°
 Double: 90°
- Round bore standard
- Square hole and keyway optional
- Most sizes ex stock

Part Number		Bore D ₁	O/D D ₂	Length				Keyway		Square S	Weight kg.

2010	2210	50	90	52	190	290	95	14	53.8	-	6.150	9.400

The Technical Appendix (pages 47-51) describe how to calculate the dimensions of the joint and contain instructions for their application.

Precision Telescopic Universal Joints - DIN 808 - Series "G"

- Made of high grade steel
- Hardened and friction polished
- Assembled almost back-lash free
- Intermediate lengths also available
- Max. angle 90°
- Max. speed 1000rpm
- Round bore standard
- Keyway and square hole optional
- Up to 32mm OD generally ex stock
- Needle Roller Bearing - Series "W" - see data below

These precision shaft joints are marked during assembly. When putting the shaft joint together again, make sure that the markings on both halves of the joint are opposite each other. It is suggested to use folding bellows filled with lubrication grease for use in difficult to access machinery.

All dimensions are in mm unless otherwise stated.

Please see page 47 for full range of protective bellows to suit.

The Technical Appendix (pages 42, 43 & 46) describe how to calculate the dimensions of the joint and contain instructions for their application.

All specifications are subject to change without notice.
